

PARITOSH MAYANDE

Bengaluru, India | +91-9343889755 | paritoshm.bpl@gmail.com | [LinkedIn](#) | [GitHub](#)

Backend & AI Engineer with 1+ year building production Java/Spring Boot REST APIs and Python LLM agent systems. Skilled in LangGraph multi-agent orchestration, RAG pipelines, and Docker microservices. Ship full-stack AI products serving 1,000+ users on AWS/GCP architectures.

EDUCATION

Bachelor of Engineering (B.E.) — Electronics & Communication

2021 – 2025

Rajiv Gandhi Prodyogiki Vishwavidyalaya, Bhopal *Relevant coursework: Data Structures, DBMS, Computer Networks, OOP*

PROFESSIONAL EXPERIENCE

Tipstat | Java Full Stack Trainee, Bengaluru

Jan 2026 – Apr 2026

- Developed a LangGraph + FastMCP email triage agent. It classifies mail into Important, Newsletters, Promotions, and Spam, then auto-routes via Gmail/Outlook MCP. Serves **1,000+ users** at **200+ emails/day** with **100% accuracy**.
- Architected 3 LangGraph sub-agents (Meeting, Task, Drafts) under an orchestrator. They extract scheduling intents, parse action items, and draft tone-matched replies, cutting manual triage by **~70%**.
- Orchestrated a LiteLLM + OpenRouter follow-up tracker. It detects overdue threads by intent and elapsed time, then auto-sends follow-ups via MCP, eliminating manual follow-up for **1,000+ users**.
- Launched a Meeting Intelligence agent on Recall.ai + Deepgram Nova-3 transcripts. Produces action items, decisions, and summaries. Processes **500+ meetings/month** via Meeting MCP (**17 tools**).

Kodnest Technologies | Java Full Stack Trainee, Bengaluru

Aug 2025 – Jan 2026

- Programmed **5+ Java backend modules** in Core Java, Spring Boot, and JDBC with MySQL. Wrote CRUD and validation across 3 database-driven projects handling **~200 daily transactions**.
- Designed REST API endpoints with Spring Boot in MVC architecture. Validated contracts via Postman across **10+ test scenarios per feature**, ensuring **zero contract regressions**.
- Modeled OOP solutions with Java Collections, custom exceptions, and Hibernate ORM for data-access abstraction. Reduced boilerplate data-access code by **~40%** across all modules.
- Delivered **2 full-stack mini-projects** (Spring Boot + frontend) secured with JWT Auth. Version-controlled via Git/GitHub across a team of **4 trainees**. Practiced JUnit and Agile sprints.

SKILLS

Languages & Backend: Java, Python, SQL, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, FastAPI, REST APIs, JDBC, JWT Auth, Docker, Docker Compose

AI Systems & Agents: LangGraph, LangChain Agents, Multi-Agent Systems, FastMCP, Deep Agents (ReAct), LiteLLM, OpenRouter, Server-Sent Events (SSE)

RAG & Vector DBs: RAG Pipelines, Qdrant, PGVector, FAISS, Sentence Transformers, Semantic Search, Redis Caching
Model Engineering: HuggingFace Transformers, QLoRA Fine-tuning, LLMs, Deepgram Nova-3 STT, Recall.ai, Prompt Engineering

Cloud & DevOps: Docker Compose, CI/CD (basic), AWS (familiar), GCP (familiar), Git, GitHub

Testing & Tools: JUnit, Postman, IntelliJ IDEA, Eclipse, MySQL, PostgreSQL, JSONB

PROJECTS

Lumen — Deep Research Platform [GitHub](#)

Full-stack AI research assistant. React/TypeScript + Tailwind frontend, Spring Boot 3.3 (Java 21) backend with JWT auth and PostgreSQL, Python FastAPI research agent. Containerised via Docker Compose.

- Engineered a Deep Agents ReAct loop with **8 custom tools** (OpenRouter primary, OpenAI fallback). Streams rich-media blocks (markdown, tables, Leaflet maps, charts, insight cards) over SSE. Redis caching cut latency by **~35%** and LLM costs by **~20%**.
- Crafted an extensible block-renderer with JSON fallback so new block types render safely without UI changes. Established secure multi-tenant conversations via JWT-gated REST APIs, JSONB message storage, and SSE checkpoints with full transcript replay.

Virtual Gesture-Based Drawing System [GitHub](#)

Real-time computer vision application enabling touchless drawing through hand gestures via webcam, built end-to-end in Java with OpenCV.

- Constructed fingertip tracking using contour detection and HSV color segmentation. Processed live video at 30 FPS and mapped coordinates to a virtual canvas for low-latency drawing.
- Optimized motion tracking with frame-by-frame processing, refined transformations, and gesture-state debouncing, cutting jitter artifacts by **~60%**.

Driver Drowsiness Alert System

Real-time driver safety system detecting prolonged eye closure using an IR eye-blink sensor, built during the Electronics & Communication degree.

- Authored Arduino signal processing logic to monitor eye state and trigger a buzzer when closure exceeded a threshold. Validated across 50+ test cases.
- Integrated sensor input, microcontroller processing, and hardware output in a real-time loop. System attained **<200ms** detection-to-alert latency for fatigue prevention.

CERTIFICATIONS

Introduction to LangChain (Python) — LangChain Academy | **Oracle Database SQL Certified Associate** — Oracle | **Java Full Stack Development** — Kodnest Technologies
